

# CBD Honey Tang

## Oregon grown Hemp

Our CBD oil is made with non-GMO hemp, grown in Oregon by local farmers. Our hemp oil is processed by following the highest standards at every step of the growing, harvesting, extracting and bottling process. Our CBD oil is 100% free of any synthetic or artificial ingredients. We test every batch of oil that we process to ensure that it meets the highest purity standards.

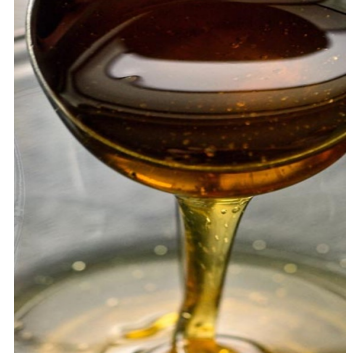

## Full Spectrum CBD Oil

There are several ways to extract CBD oil from hemp including alcohol, butane, hexane and CO2. Our hemp is extracted using supercritical CO2 which extracts the oil at a lower temperature preventing heat from damaging the cannabinoids and eliminating any impurities in the oil which can occur using other extraction methods. Once extracted the oil is considered a pure **full spectrum oil** containing all of the healing properties of the hemp plant including the full range of cannabinoids and terpenes closely mirroring the plant. The full spectrum profile is considered to be more effective than other types of extractions which remove some or all of the non CBD properties.

Promotes calmness and balance

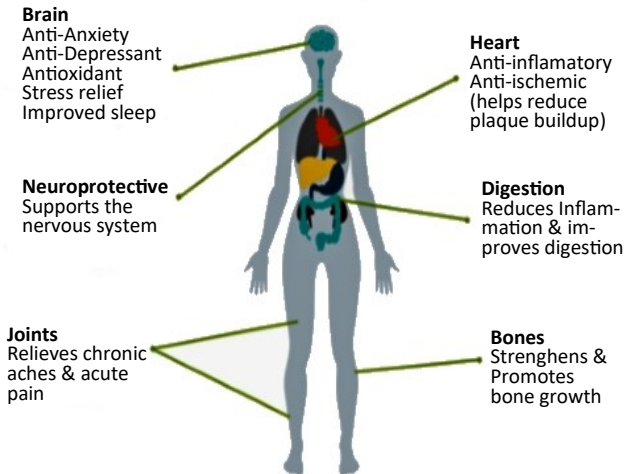

The pure CBD oil from our extractor is as thick as honey.

## The Entourage effect

CBD and the other phytocannabinoids interact with the body's endocannabinoid system to assist us in achieving health and vitality. Full Spectrum hemp oil contains the complete collection of cannabinoids including the 14 terpenes which work together providing the most synergistic benefits. When all of the cannabinoids are present in the same profile as the original hemp plant they are believed to work together in what is called the "**entourage effect**" which increases the effectiveness of the CBD oil in healing and supporting a **natural state of homeostasis and balance**.

## Health Benefits
